Gallen. 1662.

A NEW ALMANACK

for the said year.

Being the second from Leap year.

Containing the Lunations, Eclipses, Aspects of the Planets, and daily disposition of the Aire.

With Directions to such as use Marts or Faires, also to travellers that coast the kingdome.

Lately amplified with many notes of good consequence.

By *Thomas Gallen, Mathemat.*

Deus est qui omnia gubernat: Verbum & opera Jehovæ meditabor.

31	6	1	8	2	84	15	11	3	3	3	3

the use of the three former Tables of use upon use, according to the rate of 6 in the hundred.

FOr the first, if you would know to how much one pound stock amounts (at Interest upon Interest) in any number of years not exceeding 31, seeke the number of years in the first Columne towards your left hand, under this word years, and there directly against the same, you shall see the Sum desired.

Example.

Admit it be required to know how much 1 l. stock amounts at Interest upon Interest in 21 years, look 21 under the word years, and directly against the same you shall see 3 l. 7 s. 11 d. 2 q. which is the summe desired. But suppose the Question were to finde the increase of 10 l. stock in the same time, multiply the same by 10, or adde the same 10 times together, which makes 33 l. 19 s. 7 d. which is also the summe desired. And thus may you work upon any summe desired in any of the other Columes observing the manner as is before, as the Propositions nominated in the head of each colume doe direct, and thus much for compound Interest.

Now for simple Interest direct, I have composed the following Tables, at the rate of 6 *per centum*, whose use is thus. Seek the sum desired, and under the same, you shall have the Interest due for one year, or any time under, namely from one moneth to 12 as is there expressed which of it selfe, is so plain, that it needs no further explanation.

Intereſt at *6 per Centum* for 500 li. is for each moneth as followeth.

1 Mon.	2 Mon.	3 Mon.	4 Mon.	5 Mon.	6 Mon.

The fractions in this latter Table (being very ſmall and but of a farthing) are omitted as unneceſſary.

Of the Eclipses this present yeare, 1662.

There will be but two Eclipses of the Sun this year, one of which happens before the Suns Azon, and the other after it; and because they be central, there can be no Full moon Eclipse this year.

The first Eclipse of the Sun happens on Munday morning, the 10 of March, at two a clock, to be seen of such as sail upon the Indian-sea, beyond the Cape, about Green-Island neer *Nova Guinea*, where it will appear totall. This Eclipse may also be observed in *Sumatra*, *Borneo*, *Java*'s, and in the *Lubeck*, *Becach* and *Maleter* Kingdomes, but it will be seen only a partil Eclipse.

The other Eclipse of the Sun, will be on Tuesday the second of September, about high noon, yet nevertheless it cannot be visible to us in respect of the Moons Parallax, but in and about *Fago*, *Mecaya*, *Gubar* and such places as lie neer the *Blackmores*, it will be very great and almost total, yet being invisible unto us, I forbear to speak further thereof.

Upon the 12 of October this present year, 1662 at 5 a clock in the afternoon, will happen a conjunction of the two superiour Planers, *Jupiter* and *Mars*, in the 19 deg. 7 min of the most verous signe *Scorpio*; and the fifth of November following, at nine in the morning will be a notable Conjunction of *Saturn* and *Mars* in the 6 deg. and 12 min. of the fiery signe *Leo*, but being neer the Sun, it cannot be observed, however, there is no question but we shall soon taste the effects thereof.

January

January hath xxxi. days.

Last quarter the 2 day at 42 min. past noon
New moon the 10 day, at 4 and 17 min. morning.

The use of this Table with a Caution.

Doe but observe in the fifth columne of the Almanack the houres and minutes of full-sea at London-Bridge over against each severall day of the moneth, and from which time there noted, adde or substract the houres and minutes as this Table above doth point, and the totall of the one, or remainder of the other shall be the time of full sea, at any of these places aboveſaid, ſalved the Anticipation or prolation of time, which by the winds, Land-floods, Moons latitude, may be caused, which may be an hour, or sometimes more or lesse error, according to the site and quantity: a thing very remarkable of it when they passe by any sands, over any bar, river, or such like.

A true and plaine description of the High-wayes in *England* and *Wales*.

From *London* to *Cambridge* 44. miles, thus accounted:

FRom London to Waltham 12 miles, thence to Ware 8 miles, thence to Puckridg 5 miles, thence to Barkway 7 miles, thence to Fulmire 6 miles, thence to Cambridge 6 miles.

From *London* to *Oxford* 47 miles, thus:
